

SERP 2020 Group 9: Weekly Report – Joshua Wright**Week 13**

Note: Not sure if I needed another one but here it is.

What have I done for the project this week individually?

Throughout this week I worked on getting some of the last features working that we wanted for our final group presentation. This included getting the last visual changes for the programs output display graph to look more like we were originally intending on, along with getting a few more command line argument toggles to work. I also spent a fair bit of time working on creating video versions of our demos for the final presentation to help us keep the presentation to time. (This did not though stop us from running overtime though) But overall I was quite happy with the presentation, but I wish we had some more time to spend on planning it.

What you plan to do for the project next week individually?

Next week and on to the next semester I am hoping to work out ways that we can best expand our model to be able to make better use of DOE and combine more of the developed features together. I also want to spend some time looking at the GitHub wiki and other related pages to make the project site to appear more presentable and useful for anyone who needs to read and learn about our project.

List the issue you encounter and give reasons if applicable.

This week there really was not a ton of problems that caused any issues, the only real problem that I experience in this iteration was trying to get the graph tick marks to appear in the correct location for a more clean visual layout.
