

## **Software Engineering Research Project | 2020 Group 9**

### **Weekly Report S1W4**

#### What have I done this week?

After finding out that our meeting schedule would be as normal, we set to work on revising and preparing for the meeting next week. The notes I transcribed during the last meeting were messy and needed to be tidied up. I spent some time this week refining them, fixing spelling mistakes, adding titles and comments so that we can come into the meeting fully refreshed on our previous discussions. I have also continued my education in data farming and machine learning through python so that when we have the actual project in hand, we will be able to get started straight away.

I also installed and tested Zoom this week for certain lectures.

#### What do I plan to do for the project next week individually?

Next week we will have our client meeting where we will finalise the details of the project and discuss our approach. Based on this I will start communicating with our group and assigning specific roles as to best make use of our skills. I will also like to investigate how python can make ui components for the final stages of our project.

#### List the issues you encountered and give some reasons if applicable...

As I am sure with everyone, working from home has proved to be quite a different challenge. It is becoming hard to differentiate work from home, and everyday feels like the holidays with the stress of normal working activities...

However, there are benefits too, and with technology we have ways to communicate and I am sure with a bit of time we will all settle in.
