

Software Engineering Research Project

Weekly Report S1 W5

This week has been one about reflection and planning. With the client meeting this week and our proposals due right around the corner, things are starting to catch heat.

What I did this week

During the meeting this week I worked with my group mates to guide our clients through a brief in which we discussed the project and various challenges we would need to overcome to get to our goal. It was a very insightful meeting and we discovered a lot more about the requirements and the project itself from this discussion.

After reflecting on the meeting with the group, we have started work on the proposal. Our proposal will be an amalgamation of our work so far including all our client meetings, and our own research on the process of modelling and case studies our selves. We hope to present a well structured view of the project, with the requirements involved and how we plan on delivering it. So far, I have drafted the introduction, some requirements and a research methodology.

Plans for next week

Next week will be about finishing the research proposal. There is still work to be done and I have some case studies that I will be studying for the literature review. It is based on a model surrounding the corona virus and I believe it will be interesting and relevant to this project. After that we still need to finish up the rest of the section of the proposal, including fleshing out all he requirements and our proposed solutions.

Issues encountered

Having a Zoom call with abut 9 people was challenging, ad breaking the ice at the beginning was tough. After that though we began to move through the call rather well. IN future I hope to improve my communication skills to effectively preset my ideas and discuss ideas with the client.
