

## **SERP 2020 Group 9: Weekly Report – Joshua Wright**

## **Week 3**

---

### **What have I done for the project this week individually?**

This week I mainly planned for the meeting along with participated in it with the group. From that meeting I had a look at the MSG-088 process that was brought up by our client and trying to think of the best way that we can utilise that process in our assignment. As we are still in that early stages of our project, I feel that the effort required in implementing this system now rather than later in the development process should be a priority at this point in time.

Personally, I have also done a little bit of brainstorming, trying to think of the different ways that a pandemic model can be created (Given the new brief). Looking at what potential areas we could use as inputs of our theoretical model and what outputs could we possibly have.

### **What you plan to do for the project next week individually?**

This week I plan on going through in deal the new project brief that our client has given us. I also am planning on digitising the notes that I hand wrote during this week's client meeting.

I also want to next week expand my current investigation into what inputs and outputs for the model that we are going to create are valid and or possible. Especially, as we are meant to create this model to be able to process a solution from a minimal amount of input data.

I also want to go over some of the technical details that our client mentioned during our meeting. I want to do this so I know and fully understand what the client wants of me and what I will need to do to complete that task.

### **List the issue you encounter and give reasons if applicable.**

One issue that is more affecting our group as a whole is that we are changing the week that we are having our client meetings, which in the long term is probably a good thing. Though its going to be a bit difficult to come up with new things to discusses with the client given we only have one week. Considering other work at this time, I feel that this task may be somewhat challenging to overcome. Also we as a group need to find more times to be able to work with each other and discuss the tasks assigned to us.
